## ISRP

### Overview

**Inventory, Shipping, Receiving, and Picking (ISRP)** is designed to maintain inventory in a variety of business environments. This user-friendly inventory tracking system combines state-of-the-art barcode data collection on your portable data collection terminal, with a sophisticated Windows® based inventory management program for your PC. IntelliTrack software includes a ready to run, PC compatible SQL Express to manage all of your inventory data. ISRP offers a relational database to ensure data integrity, portable barcode reader integration to maximize data collection efficiency, and barcode label printing capabilities to improve data collection accuracy.

All IntelliTrack products allow concurrent connections, meaning the application can be installed and run on unlimited workstations. The number of workstation licenses purchased limits how many users can be on the system at one time.

ISRP is ideal for small to mid-sized warehouse operations. When a "Bigger WMS" is just too much, ISRP is just "Right." The application is comprised of four fully integrated functions; Inventory, Shipping, Receiving, and Picking.

### Program Requirements

#### Processor

- 1 GHz Minimum
- 1.8 GHz recommended

#### RAM

- 256 MB minimum
- 512 MB or greater recommended

#### Available Hard Disk

- Server
  - 300 MB
- Processor
  - 500 MB

#### Operating System

- Windows XP Professional SP2,
- Windows 2003 Server SP1,
- Windows Vista Home Premium,
- Vista Business, Vista Enterprise,
- Vista Ultimate, or Server 2008

#### Network Card

- Active network connection

#### Additional Requirements for the Batch Portable Component

- Internet Information Services (IIS) must be installed and operational

- Microsoft ActiveSync (with Windows XP or 2003 Server Operating Systems) version 3.8 or higher, or Mobile Device Center on Windows Vista or Windows Server 2008

## ISRP

### ISRP Inventory

Effectively maintains your inventory with physical inventory and cycle counting capabilities. Powerful utilities, such as move and edit features, allow you to keep up with the demanding pace of a warehouse environment. Use the built-in reports and queries to monitor and manage your inventory.

### ISRP Shipping

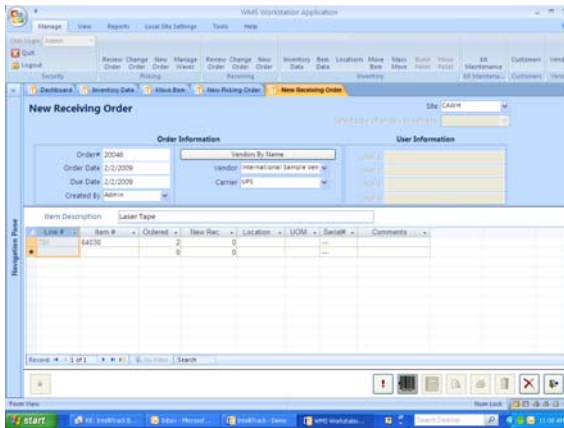

Validates order details and generates shipping labels. Shipped orders and carrier information can be exported to billing for expedient and accurate invoicing to customers.

### ISRP Receiving

Operates as a standalone application by using the Receiving form or with your existing purchase order system to import open order details. When an order is received, portable barcode readers are used to put away the order. Validation of the order number, part number, put-away location, and quantity reduces errors and speeds up the receiving process.

### ISRP Picking

Operates standalone by using the Picking (Customer Order) form or with your existing customer order system to import open order details. When an order is picked, portable barcode readers are used for validation of the part number, location, and quantity. This reduces errors and increases the accuracy of the picking process.
